Dear Humane hiring manager,

I am writing to express my string interest for the Software Intern position. My name is Thomas, and I am currently a student at the University of Bergen, pursuing a degree in computer science. I am kind of a nerd, and I have always had a passion for computers, numbers and figuring out how things work. My parents gave me quite a head start, giving me computer and programming courses early on. This has made programming a second language for me, and I strive everyday to continue to improve my skill.

For me this internship would be more than just experience. I have a two-year-old smaller brother that sadly was born with cancer in one of his eyes. To do an internship in the health-sector would allow me to contribute to making a difference in the world.

At the university we have focused on Java, Python and Haskell as programming languages. We also have a big focus on theoretical and practical aspects of databases and cybersecurity. On my own I love learning new aspects of computer science and have experience with C/C++, JS/TS, React and Unix.

I am an outgoing and fun person, but I am extremely hard working and like putting in long hours to get results. In high school I was one of the best badminton players in my county and traveled all around the world while keeping good grades in school.  I would like to credit all this to hard work, but I was lucky to have a good team around me who helped me chase my dream. Those years taught me the importance of teamwork and showed me how fun working can be when you have a good team.

Thank you for considering my application. I would welcome the opportunity to discuss how my skills and experience align with your needs in more detail. Please find my attached resume for your review. I look forward to the possibility of joining your team!

Sincerely,

Thomas Barth
